- Developed strong troubleshooting, communication, and client support skills.

PROJECTS (MORE ON GITHUB)

TOKENSHIFT

Web application in React and Supabase to manage Claude shared use shifts, with reservations, waiting queue, public history and real-time availability control.

ROOT FINDER: NEWTON-RAPHSON WEB APP

Developed a web application to approximate roots of equations using the Newton-Raphson method. Input functions are solved both graphically and numerically

PHYSICS SIMULATION: MECHANICS & ELECTRICITY

Academic group project simulating mechanical and electrical systems with logical interactions. Focused on modularity and object-oriented principles.

DATABASE EXERCISE: CRUD OPERATIONS & ER MODELING

Designed and implemented a relational database system with full CRUD features.

OBJECT-ORIENTED PROGRAMMING EXERCISE

CLI-based Python application showcasing object-oriented principles like encapsulation, inheritance, and polymorphism.
